Successful education

- its protagonists are teachers and pupils
- it’s delivered most successfully when focused on the direct human relationships between them
- its primary arena is the lesson

Its content:

- Good educational program
- Optimal amount of well-structured knowledge
- Well-organized skill developing tasks
- Effective visualization

The composition of content and the preparation of syllabuses and well-edited textbooks is the PROFESSIONALS’ task.
How can IT tools make education more effective?
How can IT tools help?

Common mistakes of education managers: that it is enough for teachers to get the most up-to-date IT tools, and that everything can be found on the Internet.

- Teachers need hardware and software optimized for education.
- This ensures any tools essential for the given lesson are at hand for the teacher.
Technology vs. Traditional Education

- Technology changes faster than teaching methods
- Students use technology with ease
- Teachers are hesitant to use technology
- This is the paradox: we need a solution to suit both parties
What is the solution?
What is the solution?

**The bridge between traditional and digital education**

The structured material of textbooks is integrated and combined with the possibilities provided by digital tools.

---

**Textbook**

- traditional tool, popular among teachers
- ensures the completion of the curriculum in content and on time
- reliable syllabus written by experts
- logically structured text and the substance can be annotated

---

**Computer**

- modern tool, popular among pupils
- interactive, can be completed at an individual pace, provides broad background knowledge
- variety of activities, games, tools
- illustrative, visualizes processes through animations

---

**mozaLearn**

The mozaLearn integrated digital educational system combines the advantages of both tools.
Digital textbooks in classrooms enriched with spectacular elements

From the first time teachers use mozaBook they feel comfortable having their well-known textbooks on the board. This encourages them to explore more and find that they can easily use the digital content the book is enriched with.

Ready-made visual materials, icons for digital content (3D animations, video and audio files, images, etc.) are inserted to the appropriate places of the textbooks.
Innovative Education: A bridge between traditional and digital

The base of the system is the mozaBook software suite developed for classroom work.

For pupils, it can also be accessed via the Internet (mozaWeb) using the same educational environment at home they have met during the lesson at school.

Provides extensive school administration possibilities.

An up-to-date tool system helps to process the curriculum more easily.
The future of digital education

- The change to digital education should be gradual
- Create quality content for teachers
- Provide teacher training
- Invest and innovate now: stay ahead of digital demand
Thank you for your attention!
